

Structured Data, Site Speed & Local Presence

A follow-on to the August rebuild: a complete LocalBusiness and Service schema layer, a 95% reduction in image weight, modern image delivery across every remaining page, and a ready-to-post ten-week Google Business Profile plan.

1 Executive Summary

What was still missing after the August work, and what this phase delivers.

The August rebuild fixed the technical foundations — sitemap, canonicals, indexing and sixteen new landing pages. This phase completes the three areas that were still partial: **structured data**, **image performance**, and the **off-site local signals** that drive Google Maps rankings.

Every page now carries a single, complete *LocalBusiness* profile — legal name, Yelahanka address, both phone numbers, opening hours, map coordinates and the full list of services — emitted once from a central source so it can never fall out of sync. The Services hub and every service page now also carry their own *Service* markup. Five oversized images totalling 32 MB were compressed to 1.5 MB, three unused 18 MB banner files were removed, and 21 old-style image tags across the expertise, projects, about and location pages were converted to Next.js's optimised image system with fixed dimensions to stop layout shift. Finally, ten Google Business Profile posts are drafted and scheduled below.

2 Structured Data — LocalBusiness & Service

One authoritative business entity, referenced everywhere; a Service description on every commercial page.

ITEM	BEFORE THIS PHASE	AFTER
LocalBusiness completeness	A single business entity existed but was missing the second phone number, carried no list of services, and named only “Bangalore” as an alias.	Added a two-number contact block (sales + support), a six-service catalogue, a Google Maps link and the “Bengaluru” spelling. Legal name, Yelahanka street address, geo-coordinates (13.1007, 77.5963) and Mon–Sat 10:00–19:00 hours were already correct and are retained.
Coverage	Business markup rendered site-wide; service markup only on the two <code>/expertise</code> pages and the sixteen landing pages.	The <code>/services</code> hub now emits one <i>Service</i> node per offering (six). The homepage service catalogue was expanded from three entries to the full six. All reference the business by ID rather than restating it.
Product pages	The six product pages and the products index carried no structured data at all.	Each now carries a <i>Service</i> (supply & installation) node and a breadcrumb trail.
Location pages	Seven hand-built area pages (HSR Layout, Indiranagar, Jayanagar, Whitefield, two Yelahanka pages, plus the Yelahanka overview) rendered visible FAQs but no FAQ markup, and no Service or breadcrumb markup.	All seven now emit <i>Service</i> , <i>FAQPage</i> and <i>BreadcrumbList</i> markup, with the FAQ text mirrored exactly from what visitors see.
Maintainability	The homepage service list was hand-written and had drifted to three items; one location page still used an inert <code>next/head</code> tag and pointed at a non-existent favicon.	Services are now defined once in <code>lib/seo/services.ts</code> and consumed by the business catalogue, the hub page and the homepage. The dead <code>next/head</code> tag and broken icon reference were removed.

How to verify. After deploy, paste `www.ac-ipl.in` and `www.ac-ipl.in/services` into Google’s Rich Results Test. Expect *Local business*, *Breadcrumb* and (on service and location pages) *FAQ* / *Service* to be detected with no errors.

3 Page Speed — Image Compression

Five images were doing more damage to load time than the rest of the site combined.

A reusable script (`scripts/optimize-images.mjs` , using the `sharp` library) was written to resize each file to a maximum width of 1600 px and re-encode it as WebP at quality 80. It is safe to re-run and skips anything already processed.

FILE	BEFORE	AFTER	REDUCTION
Villa.png → Villa.webp	8.6 MB	610 KB	–93%
Dreamhome.png → .webp	7.9 MB	268 KB	–97%
Construction.png → .webp	6.1 MB	256 KB	–96%
Officeinterior.png → .webp	5.4 MB	250 KB	–95%
Villain.png → Villain.webp	4.0 MB	101 KB	–97%
Total	32.0 MB	1.5 MB	–95%

- ✓ The one image still referenced in code (`Villain` , on the homepage “difference” band) was repointed to its new `.webp` file.
- ✓ `Hero1.png` , `Hero2.png` and `Hero3.png` (17.8 MB combined) were deleted — the homepage banner was switched to compressed WebP in the August work and these originals are no longer used anywhere.
- ✓ Net result: roughly **48 MB** removed from the deployed site.

4 Modern Image Delivery (Layout-Shift Fix)

Old-style image tags don’t reserve space while loading, which causes content to jump — a ranking factor Google measures as CLS.

Twenty-one raw `<img>` tags were converted to the framework’s image component, which serves modern formats, sizes images to the device, and lazy-loads anything below the fold. Every converted image was given either explicit width and height or a fixed aspect-ratio container, so no space is left undefined.

FILE	TAGS CONVERTED	METHOD
app/expertise/construction/page.tsx	5	Fixed 300×300 grid; 3:2 container for cards
app/expertise/interior/page.tsx	5	Fixed 300×300 grid; 3:2 container for cards
app/featured-projects/page.tsx	4	Fill within fixed-height / aspect parents
app/about/page.tsx	1	Explicit 448×400 (CEO portrait)
6 × location page project carousels	6	Fill within the existing <code>h-72</code> card

- ✓ Placeholder-image fallbacks were pointed at a real raster file instead of an SVG, so the optimiser never has to be bypassed.

- ✓ `components/partners-section.tsx` was deleted — it was never imported by any page (dead code carrying its own unoptimised image).
- ✓ Two `<img>` tags remain by design: a 16 px Google “verified review” icon, and one homepage project thumbnail that depends on natural aspect ratio and is already lazy-loaded.

5 Image Alt Text

Product images described themselves in one or two words. Search engines and screen readers got nothing useful.

Thirteen alt descriptions across the seven product pages were rewritten from bare labels (“Fire Doors”, “System Railings”) to specific, location-aware sentences, e.g. *“Fire-rated steel and timber doors for commercial and residential buildings in Bangalore — ACIPL”*. Collection-grid images now build their alt text from the product name plus a service-and-city suffix, so every thumbnail is described.

6 Quality Verification

Checked automatically before hand-off.

CHECK	RESULT	COVERAGE
TypeScript compile — no errors	Passed	whole project
Production build succeeds	Passed	51 routes
Static pages generated without error	Passed	51 / 51
Structured data present in served HTML	Passed	309 blocks / 42 pages
LocalBusiness on homepage & every service page	Passed	single <code>@id</code>
Both phone numbers in the business markup	Passed	sales + support
No raw image tags in the eleven targeted files	Passed	21 converted
Oversized source images removed from <code>public/</code>	Passed	~48 MB

7 Google Business Profile — 10-Week Posting Plan

One post per week for ten weeks, rotating across five services and ten Bangalore localities. Each is around 150 words and ends with a WhatsApp call-to-action. Paste into GBP → Add update, attach a matching project photo, and set the “Learn more” button to the linked page.

WhatsApp link for every post: <https://wa.me/918073141413> · **Phone:** +91 99000 94942 · **Rotation:** Home Interiors → Office Renovation → Modular Kitchen → Turnkey Construction → Renovation, twice.

Week 1

Monday 7 September 2026

HOME INTERIORS YELAHANKA

Planning a home interior in Yelahanka? ACIPL is your local, in-house team for turnkey interiors — design, execution and product supply under one contract. From modular kitchens and wardrobes to false ceilings, TV units, lighting and painting, we run every trade so you have one point of contact, not ten. Our office is in Yelahanka New Town, so site visits are quick and supervision is daily. You get 2D layouts and full 3D visualisation before work starts, an itemised quote with no hidden costs, and a realistic timeline — most 3BHK homes are handed over in 45 to 60 days. We also cover Jakkur, Thanisandra and the wider Yelahanka belt, and we can phase the work if you are living on site. Book a free site visit and written quote this week. Message us on WhatsApp at wa.me/918073141413 or call +91 99000 94942 to get started.

Week 2

Monday 14 September 2026

OFFICE RENOVATION

WHITEFIELD

Is your Whitefield office starting to show its age? ACIPL handles commercial renovation on live floors — phased so your team keeps working while we upgrade meeting rooms, workstations, flooring, lighting, HVAC and cabling. We coordinate with your building management on fit-out approvals and after-hours access, and we work to your headcount and brand guidelines rather than a template. Every renovation starts with a measured site survey and an itemised scope, so you can compare our quote line by line. Tech parks and standalone buildings across Whitefield, Kadugodi and Brookefield are all within our regular service area, and most refurbishments are delivered in four to eight weeks depending on floor size. We can also stage the work so client-facing areas like reception are finished first. There is no charge for the walkthrough or the estimate. Message us on WhatsApp at wa.me/918073141413 or call +91 99000 94942 to book yours.

Week 3

Monday 21 September 2026

MODULAR KITCHEN

HSR LAYOUT

A modular kitchen in HSR Layout should be built for Bangalore's humidity, not just photographed well. ACIPL uses moisture-resistant carcasses, branded hinges and channels, and finishes you can actually maintain — then we coordinate the counter, backsplash, plumbing and electrical points so nothing is an afterthought. You get a 3D design of your exact layout, per-unit pricing you can adjust, and a clear delivery date. Whether it is a compact L-shape in a 2BHK or an island kitchen in a villa, the quote is itemised down to each shutter and drawer, with no lump-sum guesswork. We install across HSR Layout, Sarjapur Road and Agara, usually within three to four weeks of design sign-off, and appliance cut-outs and chimney points are set out to the exact models you choose. Send us your floor plan for a free layout and estimate. Message us on WhatsApp at wa.me/918073141413 or call +91 99000 94942.

"Learn more" link: </interior-designers-in-hsr-layout-bangalore> · 150 words

Week 4

Monday 28 September 2026

TURNKEY CONSTRUCTION

HEBBAL

Building on a site in Hebbal? ACIPL takes a plot to a finished home under one turnkey contract — BBMP plan sanction and approvals, structural design on record, architecture, MEP and interiors, all the way to handover. You deal with one team and one stage-linked payment schedule, so money is released against work completed, not promises. We share the structural drawings, the bill of quantities and a week-by-week programme before we break ground, and you get regular site photos and a dedicated project manager throughout. Hebbal, Kempapura, Sahakar Nagar and the wider north Bangalore belt are all areas we build in regularly, and a typical independent house runs eight to twelve months. We also help with bank-loan documentation and the completion certificate where you need them. Book a free consultation and site assessment this week. Message us on WhatsApp at wa.me/918073141413 or call +91 99000 94942 to start.

Week 5

Monday 5 October 2026

RENOVATION

JAYANAGAR

Older homes in Jayanagar have great bones and dated everything else. ACIPL renovates them without a full teardown — rewiring and re-plumbing, waterproofing, flooring, kitchen and bathroom remodelling, false ceilings, painting and new windows and doors. We start with a condition survey so surprises behind the walls are priced in from the beginning, not sprung on you halfway through. You get a room-by-room scope, an itemised quote and a sequence that keeps at least part of the house usable where possible. We work across Jayanagar, JP Nagar and BTM Layout, and most whole-home renovations run six to ten weeks depending on scope. We can also renovate one floor or one wing at a time if the house must stay occupied. The site visit and written estimate are free. Message us on WhatsApp at wa.me/918073141413 or call +91 99000 94942 to arrange a visit.

Week 6

Monday 12 October 2026

HOME INTERIORS

KORAMANGALA

Fitting out an apartment in Koramangala? ACIPL delivers turnkey home interiors designed around how you actually live — storage planned to the millimetre, lighting layered for evenings, and finishes chosen for a rented or owned flat as needed. Design, carpentry, electrical, painting and styling all run under one contract and one project manager, so the timeline holds. Before anything is cut we walk you through 3D views of every room, and the quote is itemised so you can trade a marble slab for a quartz one and see the difference instantly. We cover Koramangala, Ejipura and St John's Road, and most flats are handed over in six to eight weeks. Handover includes a snag-fix round, a written warranty on carpentry and finishes, and a walkthrough of how every unit works. Message us on WhatsApp at wa.me/918073141413 or call +91 99000 94942 to book a free consultation.

Week 7

Monday 19 October 2026

OFFICE RENOVATION

ELECTRONIC CITY

Renovating an office in Electronic City means working around shifts, security and a live network. ACIPL plans commercial refurbishments in phases so no team loses a working day — we upgrade workstations and cabins to your current headcount, redo flooring, ceilings and lighting, and re-route HVAC, power and data cleanly. We handle landlord and fit-out-manual compliance, and we schedule the disruptive work for evenings and weekends. Every project begins with a measured survey and a line-by-line scope you can put out to comparison. Phase 1, Phase 2 and the Neeladri Road cluster are all within our regular coverage, and a floor is typically turned around in four to seven weeks. Reception, boardrooms and other client-facing areas can be prioritised, and we hand the floor back cleaned and cable-managed. Message us on WhatsApp at wa.me/918073141413 or call +91 99000 94942 for a free walkthrough.

"Learn more" link: </office-interior-design-in-electronic-city> · 143 words

Week 8

Monday 26 October 2026

MODULAR KITCHEN

MARATHAHALLI

A modular kitchen in Marathahalli often has to fit fixed plumbing and a compact apartment footprint — so we design around what cannot move. ACIPL prefabricates units in the factory rather than cutting on site, which means a cleaner install and a tighter finish. You choose the layout from a 3D model, pick shutter finishes and hardware to your budget, and get per-unit pricing you can adjust before sign-off. Soft-close drawers, tall units, corner carousels and a coordinated backsplash are all specified in writing. We fit kitchens across Marathahalli, Kundalahalli and Varthur, usually within three to four weeks of approval, with society gate-pass and debris clearance handled by us. Appliance points, chimney ducting and water-purifier taps are all set out before the units go in, so nothing is retrofitted later. Message us on WhatsApp at wa.me/918073141413 or call +91 99000 94942 for a free layout.

"Learn more" link: </modular-kitchen-in-marathahalli> · 145 words

Week 9

Monday 2 November 2026

TURNKEY CONSTRUCTION

JP NAGAR

Constructing a home in JP Nagar? ACIPL runs the whole build under one turnkey contract — plan sanction and BBMP approvals, structural engineering, architecture, MEP and interiors through to handover. Payments are linked to completed stages, so you always know what you are paying for. You receive the structural drawings, a full bill of quantities and a week-by-week schedule before excavation, plus a dedicated project manager, regular site updates and a shared folder of drawings and bills you can open anytime. We build across JP Nagar, Bannerghatta Road and Puttenahalli, and a typical independent house takes eight to twelve months depending on scope. We also coordinate soil testing, borewell drilling and the BESCOM and water connections, so you are not chasing separate vendors during the build. Book a free consultation and site assessment this week. Message us on WhatsApp at wa.me/918073141413 or call +91 99000 94942 to begin.

"Learn more" link: </expertise/construction> · 147 words

Week 10

Monday 9 November 2026

RENOVATION

INDIRANAGAR

Indiranagar homes and shops often need a smart refresh rather than a rebuild. ACIPL handles targeted renovation — layout tweaks, waterproofing, flooring, kitchen and bathroom updates, false ceilings, fresh electrical and lighting, painting and new joinery. We survey the space first so anything hidden behind walls or under floors is priced from the start. You get a room-by-room scope, an itemised quote and a work sequence that limits how long any area is out of use. Commercial units on 100 Feet Road and CMH Road and homes across Indiranagar and Domlur are all part of our regular coverage, and most projects run four to nine weeks. Shopfronts and clinics can be scheduled around opening hours to avoid lost trading days, dust is contained with temporary partitions, and we can take evening or Sunday slots to keep a shop trading through the work. Message us on WhatsApp at wa.me/918073141413 or call +91 99000 94942 today.

8 Recommended Next Steps

Do now

- ✓ Deploy this branch, then submit `www.ac-ipl.in/sitemap.xml` in Google Search Console and Bing Webmaster Tools if not already done.
- ✓ Run the homepage and `/services` through the Rich Results Test and confirm LocalBusiness, Service, FAQ and Breadcrumb parse cleanly.
- ✓ Start the Google Business Profile schedule above — Week 1 on Monday 7 September. Attach a real project photo to each post.

Requires a decision from you

- **Review rating claim.** The site still tells Google it holds a 4.9 rating from 47 reviews with no reviews displayed to support it. Either surface genuine reviews on the site or remove the claim. **PRIORITY**
- **Replace placeholder photography.** The two `/expertise` pages and parts of the featured-projects page still use grey placeholder images. They now load efficiently, but real project photos would materially help these pages rank and convert.
- **Remaining large PNGs.** A handful of other `public/` images (`modernvilla.png`, `Homein1.png`, several hero-band files) are 0.7–1 MB each. Re-running `scripts/optimize-images.mjs` against an expanded list would clear them.

Ongoing

- Keep posting to Google Business Profile weekly after this batch ends — it is the single strongest factor for local map rankings.
- Request reviews from completed clients, ideally naming the area and the service.
- Publish project case studies to the blog, each linking to the relevant location page.
- Check Search Console monthly for coverage issues and new query opportunities.

Scope note. This report documents work implemented and verified in the build, not rankings achieved. The structured-data and speed work is a prerequisite for local ranking; the Google Business Profile activity and reviews are what convert that foundation into map placement and calls.
